

Weather Web Part

Basic Version

© AMREIN ENGINEERING AG

Version 1.1

January 2010

Description

The Weather Web Part displays the current weather plus a forecast for the next two days as provided by the Yahoo Weather RSS feed.

The Web Part can be used with Windows Sharepoint Services V3, MOSS and Sharepoint 2010.

The RSS feed is automatically cached by Sharepoint for 1 hour to avoid unnecessary network traffic.

Since the web part connects to an external RSS feed, it needs to be deployed to the Global Assembly Cache (GAC) for security reasons.

The following parameters can be configured:

- Locations: Multiple location can be specified (including international locations)
- Temperature Units (Fahrenheit or Celsius)
- Humidity/Wind information

Prerequisites

Before you attempt to install the solutions you need to make sure that you have the following installed on your server(s):

- Windows SharePoint Services 3.0, Microsoft Office SharePoint Server 2007 or Sharepoint 2010

Installation

Manual Installation

1. download and unpack the **AEWeatherWebpart.zip** file.
The ZIP archive contains the WeatherWebpart.dll and the AEWeather.webpart files.
2. drop the WeatherWebpart.dll either into the SPS web application bin directory or into the GAC of your Sharepoint server (c:\windows\assembly).
3. add the following line to the "<SafeControls>" section of your Web.Config file.
Please make sure that the line is added as one single line (no line breaks):

```
<SafeControl Assembly="WeatherWebpart, Version=1.0.0.0, Culture=neutral,
PublicKeyToken=0c7263ef63d76f87" Namespace="WeatherWebpart" TypeName="*" Safe="True" />
```

4. from the top site go to "Site Actions/Site Settings/Modify All Site Settings/Galleries/Web Parts"
5. use the "Upload" menu option to upload the AEWeather.webpart file.

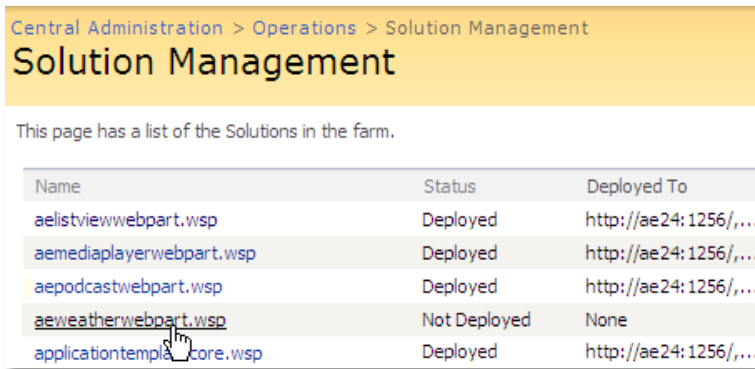

Automatic Installation

1. Unpack the **AEWeatherWebpart.wsp** and **Install.bat** files from the Zip Archive and place the 2 files onto your Sharepoint Server.
2. Add the Solution by either running **Install.bat** (WSS 3.0 or MOSS 2007) or **Install2010.bat** (Sharepoint 2010) or by manually entering:
`stsadm -o addsolution -filename AEweatherwebpart.wsp`

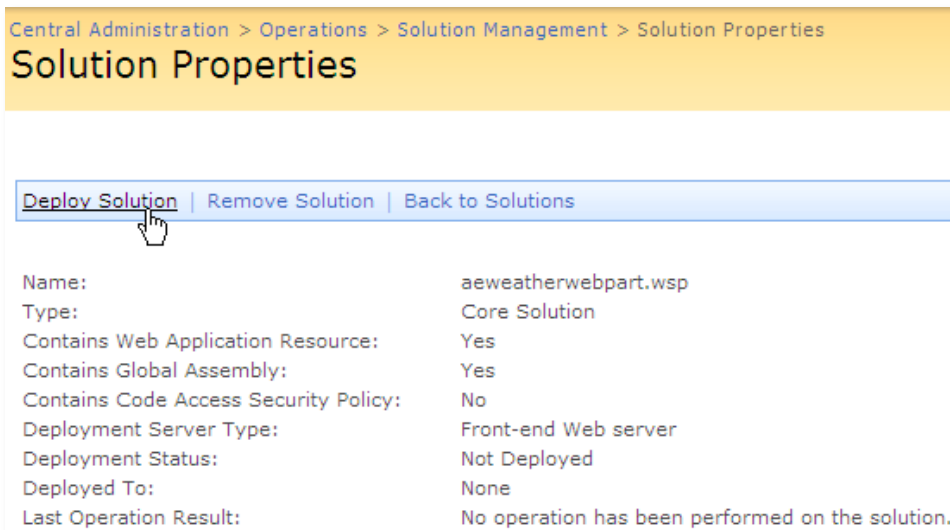

3. Deploy the solution by navigating with your browser to “Central Administration->Operations->Solution Management”:

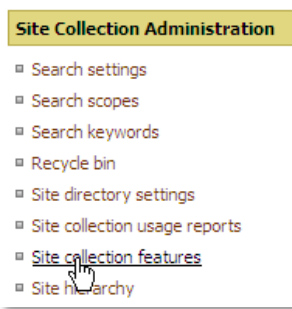

4. You should now see the **AEWeatherWebpart.wsp** in the farm’s solution store:

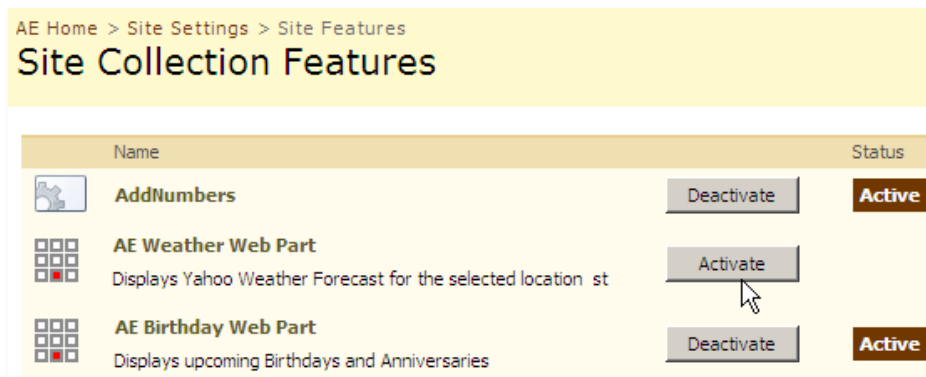

Click on “AEWeatherWebpart.wsp” to deploy the solution:

5. Proceed to activate the feature by navigating to the "Site Actions/Site Settings" page in your top-level site:

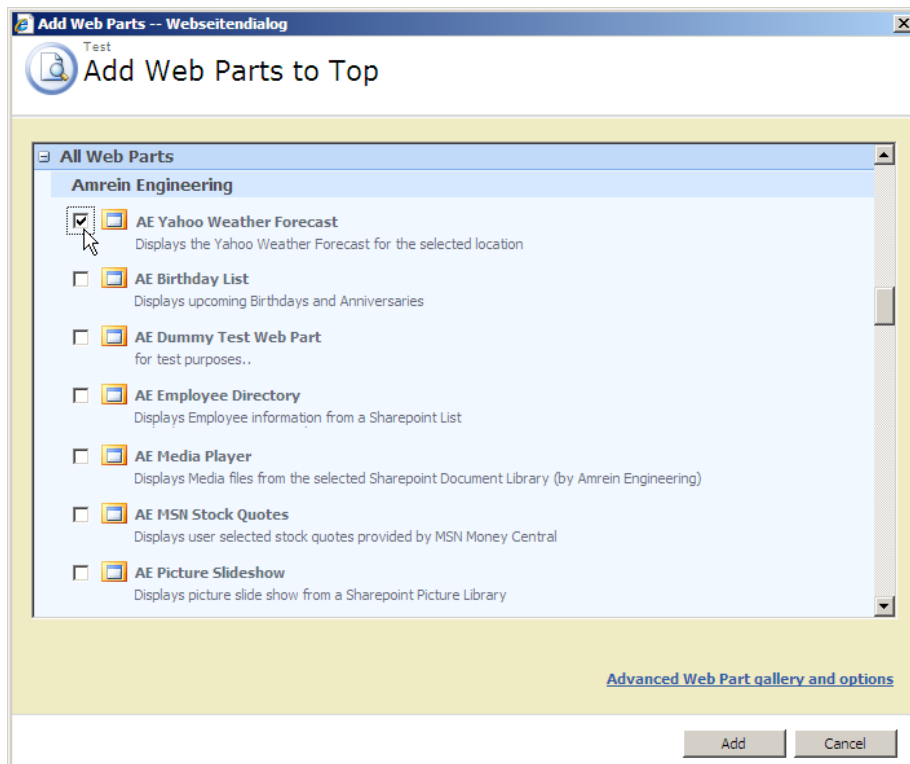

Choose "Site collection features" to navigate to the Site Collection Features page:

Activate the "AE Weather Web Part" feature

Adding the Web Part to a Page

Navigate to a page where you would like to place the web part and choose "Site Actions/Edit Page"
Add the web part to the appropriate zone. The web part is listed in the "Amrein Engineering" gallery section:

License Activation

You have the following 3 options to enter your License Key:

1. Enter the License Key into the corresponding "License Key" field in the web part configuration pane (See Description above).

2. WSP Solution Deployment:

Add the **License.txt** file (as supplied by AMREIN ENGINEERING after having purchased a license) to the Solution at the following location:

```
c:\Program Files\Common Files\Microsoft Shared\Web Server  
Extensions\12\template\features\AEWeatherWebpart
```

Manual Deployment:

Add the License Key to your web.config (typically found at c:\inetpub\wwwroot\wss\virtualdirectories\80) **<appSettings>** section as follows:

```
<appSettings>  
<add key="AEWW" value="AEWW-x-xxxxx-xxxxx-xx-xx" />  
</appSettings>
```

Replace the "x" characters with your actual key values.

Please note that this method requires you to manually add the key to each Sharepoint application.
