80+ web parts, classic and modern pages, new releases	
2. Editions & pricing	5
Dev Server, Small Farm and Multi Server tiers	
3. Getting your license key	6
Ordering online, by purchase order, and renewal	
4. Install & activate	7
Deploy the web parts and paste the family-wide key	
5. Requirements & scope	8
Supported platforms and what is not covered	
6. Support & service levels (SLA)	9
Default SLA included; Extended and Premium as options	
A. Appendix A — Editions at a glance	11
B. Appendix B — Quick checklist	11

About this guide

The **Amrein SharePoint Web Part Bundle** gives you the complete library of Amrein web parts — **more than 80** — for one predictable yearly price. Instead of licensing each product separately, a single **family-wide license key** activates every web part across your farm.

Amrein WebParts are supported and owned by **Bloch Engineering**. The bundle covers every web part listed on amrein.com for classic, server-side farms — SharePoint 2007 through 2019 / SE. On modern pages (SharePoint 2019 / SE), an included SPFx container instantiates the server-side web parts, so the same web parts also work there.

Why a bundle?

One key, one renewal date and one support contact for your whole web part library. It is simpler to buy, simpler to budget and far quicker to deploy than licensing each product on its own.

What you will find in this guide

1. What is included in the bundle
2. The editions and their yearly prices
3. How to get and renew your license key
4. How to install and activate the web parts
5. Which platforms are supported — and what is not covered
6. How support and service levels (SLA) work

The big picture

```
Subscribe (Dev / Small Farm / Multi Server)
|  order online or by purchase order
▼
Family-wide license key (e-mailed to you)
|  pasted into each web part's "License Key" property
▼
Every Amrein web part on your farm → activated
|  bound to your Farm ID + subscription tier
▼
New releases during your term → covered by the same key ✓
```

1. What the bundle includes

The bundle is a *whole-family* license: it is not a cut-down product pack, but access to the full Amrein WebParts catalogue under a single key.

Included	Details
80+ web parts	Every Amrein web part listed on amrein.com — calendars, lists, navigation, news, forms, tiles, viewers and more.
Classic & modern pages	Web parts can be placed directly on classic pages. On modern pages (SharePoint 2019 / SE), an included SPFx container instantiates the server-side Amrein web parts, so the same web parts also work there.
New releases	Any new web parts and updates published during your subscription term are covered by the same key at no extra cost.
All servers in your tier	One key activates the web parts on every server that matches the tier you bought (see section 2).
Renewal reminders	We e-mail a reminder 30 and 14 days before your subscription expires, so nothing stops working unexpectedly.

One key, the whole farm

You do not license products one by one and you do not license per user. The key is bound to your **Farm ID** and to the **subscription tier**, not to a count of users or web parts.

2. Editions & pricing

Every edition is a fixed-term **yearly subscription** covering the whole family. Choose the edition that matches your farm; the same key then activates all web parts on every server within that tier.

Edition	Best for	Servers	Price / year
Dev Server	Development and testing on a single all-in-one server.	1	USD 400
Small Farm	Up to two servers — a dedicated SQL server plus a front-end server.	2	USD 1,200
Multi Server	A production farm of any size, with any number of front-end servers.	Unlimited	USD 1,999

Which edition should I pick?

Choose the edition that matches your production farm. The key is issued for one tier, so select the tier your production servers run on.

Need more time to evaluate?

Every web part ships with its own default evaluation period. If that is not enough for your testing, request an **evaluation license key per product** by e-mail at info@amrein.com.

Subscriptions are time-limited

A license is valid for its term (normally one year). If it is not renewed, the web parts stop being licensed at the end of the term — renew in good time using the reminders we send.

3. Getting your license key

There are two ways to order, and both lead to the same thing: a family-wide key sent to your e-mail address.

A Order online

1. Open the bundle page on <https://www.amrein.com> and choose your edition.
2. Click **Subscribe online** and complete checkout.
3. Your key is issued to the e-mail address you used; keep it up to date in the license portal.

B Order by purchase order

1. E-mail your purchase order to info@amrein.com.
2. We issue your key the same business day.
3. Quote the edition (Dev Server, Small Farm or Multi Server) on the PO.

Renewing

You will receive a reminder **30 days** and **14 days** before your subscription expires. Renew from the license portal or by purchase order; the same key is extended, so no reinstallation is needed.

Keep your reminder e-mail current

The key and the renewal reminders are sent to the address on file. Update it any time in the license portal at </license/login>.

4. Install & activate

Installing the bundle uses the same procedure as any single Amrein web part; the only difference is that the same key activates all of them.

A Download the installation instructions

1. On the bundle page, open the download table.
2. Download the Web Part Installation Instructions for your SharePoint version (2013, 2016 or 2019 / SE).

B Deploy the web parts

1. Install the web parts manually, or deploy the farm solution, as described in the instructions.
2. Add the web parts you need to your pages.

C Activate with your key

1. Open each web part's editor (property pane).
2. Paste your family-wide bundle key into the **License Key** property.
3. Publish the page. The same key activates every web part covered by your subscription.

One paste per web part

Because the key is family-wide, you use the *same* key everywhere — there is no per-product key to track.

Alternative: unlock from the file system (no per-web-part setup)

Instead of pasting the key into each web part, place the family-wide key **once per front-end server** in that server's `web.config`. Every web part accepts the same `AEWB` entry, so this single setting unlocks **all web parts on the server**:

```
<appSettings>
  <add key="AEWB" value="<your-family-key>" />
</appSettings>
```

Repeat on each front-end server, then recycle the app pool.

Where is my Farm ID?

Your key is bound to your **Farm ID** — the first eight characters of your farm GUID. It is shown in the evaluation banner of any web part. Quote it if you ever need support.

5. Requirements & scope

Requirement	Details
SharePoint version	SharePoint 2007 – 2019 / SE (on-premises and older farms), classic and modern pages.
Server-side web parts	Amrein WebParts are classic, server-side web parts and require a farm solution deployment. On modern pages (SharePoint 2019 / SE) they run inside an included SPFx container that instantiates them.
Permissions	Farm administrator rights to deploy solutions and edit pages.
Valid license key	A current family-wide bundle key, bound to your Farm ID and subscription tier.

Not the same as SharePoint Online

This bundle covers the **Amrein SharePoint Web Parts** (amrein.com) only — the classic, server-side web parts for SharePoint 2007 – 2019 / SE. **SharePoint Online / Microsoft 365?** [Bitalus](#) offers its own web part bundle for **Microsoft 365 (SharePoint Online), SharePoint 2019 and SE**, built with modern SPFx web parts. That bundle is separate and is not included here.

6. Support & service levels (SLA)

Every product includes our default SLA at no extra cost. Additional service levels can be purchased individually as an option on top of your subscription. When you need help, quote your **Farm ID** and the web part involved.

Service level	Price / year	Included
Default SLA INCLUDED	Free	• Access to support via e-mail • Average response time: 2 – 3 working days • New versions during the active license, always free of charge
Extended Support OPTION	USD 450	• Access to support via e-mail • Average response time: 1 working day • New versions during the active license, always free of charge • Small feature implementation included (2 incidents, ~2 hours)
Premium Support OPTION	USD 950	• Access to support via e-mail and remote session • Average response time: 4 – 6 hours • New versions during the active license, always free of charge • Medium feature implementation included (3 incidents, ~4 hours)

How to request an SLA upgrade

Extended and Premium Support are ordered per year. To inquire about or request one, e-mail info@amrein.com (or use the request form on the Support page at [/apps/page_Q-AESupport](/apps/page_Q-AESupport)) and we will get back to you as soon as possible.

Topic	How it works
Technical support	E-mail info@amrein.com or info@bitalus.com .
Updates & new web parts	Covered by your subscription during the term — no extra charge.
Renewals	Reminder e-mails 30 and 14 days before expiry; renew online or by purchase order.
License portal	Manage your reminder e-mail and keys at /license/login .

Plan your renewal

Add the renewal reminder to your calendar as soon as you receive it, so your web parts never stop working over an unnoticed expiry.

Appendix A — Editions & SLA at a glance

Edition	Servers	Price / year	Notes
Dev Server	1	USD 400	Development and testing.
Small Farm	2	USD 1,200	Dedicated SQL server plus a front-end server.
Multi Server	Unlimited	USD 1,999	Production farm of any size.

Service level	Price / year	Response & extras
Default SLA	Included	E-mail support, 2 – 3 working days.
Extended Support	USD 450	E-mail support, 1 working day, small feature (2 incidents, ~2 h).
Premium Support	USD 950	E-mail + remote session, 4 – 6 hours, medium feature (3 incidents, ~4 h).

Appendix B — Quick checklist

- ☐ Edition chosen (Dev Server, Small Farm or Multi Server)
- ☐ Ordered online or by purchase order to info@amrein.com
- ☐ Family-wide license key received by e-mail
- ☐ SLA level decided (Default included; Extended or Premium optional)
- ☐ Installation instructions downloaded for your SharePoint version
- ☐ Web parts deployed on the farm
- ☐ Key pasted into each web part's **License Key** property
- ☐ Farm ID noted for support
- ☐ Renewal reminder added to the calendar
